

Raid Leader Operational Briefing

Automatic Boss Loot Lifecycle & Loot Window Stability Architecture

Target Audience: Raid Leader Pysanka & Raid Staff **Addon:** RollFor (Vanilla 1.12.1 / Turtle WoW) **Status:** Patched & Verified

1. Executive Summary

This briefing details critical structural fixes and enhancements made to **RollFor** to resolve two major operational pain points reported during raid management:

- Automatic Boss Loot Transition:** Overhauled the broken `Auto group loot` system to accurately detect boss pulls, boss kills vs. raid wipes, track distributed items across all rolls, and safely return the raid to **Group Loot** once all boss assignments are complete.
- Loot Window Premature Closing Bug:** Discovered and resolved the root cause behind the rare but frustrating bug where the corpse loot window repeatedly closes upon opening.

2. Auto Master Loot & Auto Group Loot Lifecycle

In vanilla raiding, the ideal operational mode is **Group Loot** during trash pulls (to allow trash greens, cloth, and reagents to be looted and rolled on without manual intervention) and **Master Loot** strictly on boss encounters.

Previously, RollFor's `AutoGroupLoot` was flawed: it only worked if the boss was explicitly targeted at the instant of corpse opening, failed if a single unwanted item or coin was left on the corpse, had no concept of waiting for item assignments, and completely ignored Blackwing Lair.

The New State-Machine Lifecycle

- Encounter Engagement:** When the raid engages a boss (entering combat via `PLAYER_REGEN_DISABLED` while targeting a raid boss), RollFor verifies leadership status and immediately sets loot mode to `Master Loot` with the leader as Master Looter.
- Encounter Outcome Detection:**
 - On Wipe / Reset:** If combat ends (`PLAYER_REGEN_ENABLED`) and the boss is not dead, RollFor detects the wipe and instantly reverts loot back to `Group Loot`.
 - On Boss Kill:** When `CHAT_MSG_COMBAT_HOSTILE_DEATH` fires (e.g., *"Ragnaros dies."*), RollFor flags the victory and holds Master Loot active for distribution.
- Corpse Opening & Item Registration:** Upon right-clicking the boss corpse, RollFor inventories all dropped items meeting Master Loot criteria ($\geq$ threshold or Bind-on-Pickup).
- Live Assignment Tracking:** As items are rolled and awarded via RollFor's roll controller, the pending boss item count automatically decrements.
- Safe Return to Group Loot:** Once all boss drops have been assigned (or all items cleared from the corpse), RollFor automatically reverts the loot method back to **Group Loot** with an informative chat announcement.

Encounter Event	Internal Trigger	Raid Leader Experience
Boss Engaged	Combat + Boss in Target	Switches automatically to Master Loot .
Raid Wipe / Reset	Combat Drops + Boss Alive	Immediately reverts to Group Loot .
Boss Defeated	Combat Log Hostile Death	Maintains Master Loot; prepares item distribution.
Corpse Looted	<code>LOOT_OPENED</code>	Inventories all epic/rare/BoP drops for assignment.
Items Assigned	<code>loot_awarded</code> / corpse empty	Once the final item is awarded and the window closes, reverts to Group Loot .

3. Resolution: Why the Loot Window "Kept Getting Closed"

The issue where the loot window snaps shut or repeatedly closes upon clicking a corpse stems from three specific mechanisms in Vanilla 1.12:

Root Cause 1: Blizzard's Hidden Frame OnHide Hook (Addon Conflict)

In vanilla WoW, the default UI frame `LootFrame` has an `OnHide` script defined by Blizzard:

```
function LootFrame_OnHide()  
    CloseLoot()  
end
```

Even though RollFor disabled events on Blizzard's frame, whenever the user pressed `Escape`, opened their Character panel (`C`), opened Bags (`B`), or had another addon manage UI panels, Blizzard's hidden frame triggered `OnHide` → **calling `CloseLoot()`**. In turn, RollFor received `LOOT_CLOSED` and hid its own custom window!

The Code Fix Applied

We updated `main.lua` during player login to neutralize both Blizzard's and pfUI's scripts: `LootFrame:SetScript("OnHide", nil)` and `pfLootFrame:SetScript("OnHide", nil)`. Rogue UI events will no longer force-close active loot sessions.

Root Cause 2: Changing Loot Method Mid-Loot Session

Calling `SetLootMethod()` while any player in the raid has a loot window open forces the WoW server to invalidate and reset the active loot transaction, closing the window immediately.

The Protection Applied

RollFor now enforces a strict safety guard: `SetLootMethod` is **never called while `loot_list.is_looting()` is true**. If assignments finish while the corpse window is open, the change queues safely until the window closes.

Root Cause 3: The Vanilla Auto-Loot Trap (Raid Leader Action Item)

Crucial Practice for Master Looters

If your client has **"Auto Loot"** enabled in *Interface Options* → *Controls* or uses fast-loot addons (e.g. `QuickLoot`, `LazyPig`, `pfUI` fast autoloot):

When you right-click a boss corpse, the client/addon attempts to auto-loot all slots. Because BoP / Master Loot items cannot be looted via standard right-click, the auto-loot routine finishes taking coins, assumes looting is complete, and calls `CloseLoot()`!

Solution: Always hold `Shift` when opening a Master Loot corpse if you have Auto Loot enabled, or disable external autoloot on raid bosses.

4. Configuration & Best Practices

- **Enable Options in RollFor:** Type `/rf config` and verify that both **"Auto master loot"** and **"Auto group loot"** are checked.
- **Blackwing Lair Fully Supported:** Previous versions disabled automatic group loot in BWL; this restriction has been completely lifted.
- **Corpse Proximity on Giant Bosses:** On massive hitboxes (Onyxia, Ragnaros, Nefarian), avoid micro-stepping while looting, as server-side distance checks in 1.12 can jitter and close the loot session if distance exceeds 5 yards.
